

EUNHYEOK KIM | JUSTIN KIM

Computer Science and Engineering Student | Software Development | Frontend | Unity / C#
Seoul, Republic of Korea | eunhyeok1106@gmail.com | github.com/eunhyeok1106 | eunhyeok1106.github.io

TECHNICAL SKILLS

Languages: C, C++, Java, C#, Python, Verilog, HTML, CSS, JavaScript

Web / Frontend: HTML structure, CSS layout, JavaScript DOM/events, JSON, responsive basics, GitHub Pages, login/sign-up flow exposure

Unity / C#: Scenes, GameObjects, Components, MonoBehaviour lifecycle, Inspector workflow, Prefabs, ScriptableObjects, builds

Unity systems: Rigidbody, Collider, Trigger/Collision behavior, Canvas/UI, Animator, AudioSource/SFX, NavMesh, GameManager/SceneManager patterns

CS foundations: Data structures, algorithms, Big-O analysis, OOP, debugging, digital logic, FSMs, counters, math/statistics foundations

Development tools: Git, GitHub, GitHub Desktop, VS Code, Visual Studio, CLion, IntelliJ IDEA, Replit, npm

Documentation: Markdown, README writing, Notion, Word/Google Docs, PowerPoint/Slides, basic Excel/Sheets table organization

LANGUAGES

Korean: Native

English: Professional / academic working proficiency

Spanish: Conversational

Chinese: Basic conversational

STRENGTHS

- Implementation-focused problem solving
- Debugging and iterative improvement
- Structured technical documentation
- Cross-domain learning across software, web, Unity, and digital logic

PROFILE

Computer Science and Engineering student at Seoul National University with practical programming experience across C, C++, Java, C#, Python, Verilog, web technologies, and Unity/C#. Focused on implementation-level problem solving, frontend development, interactive systems, digital logic, debugging, and Git-based project workflows.

EDUCATION

Seoul National University | B.S. in Computer Science and Engineering, in progress

- Relevant academic areas include programming, object-oriented development, data structures and algorithms, digital logic, discrete mathematics, multivariable calculus, statistics/probability, and web development.

SELECTED TECHNICAL PROJECTS

GitHub Pages Personal Website | Static Web Development

- Built and deployed a static personal website using HTML, CSS, JavaScript, GitHub Pages, and a public GitHub repository.
- Structured website sections for education, skills, projects, contact information, planned courses, and a downloadable CV.

Poker Web Prototype | Web / JavaScript Prototype

- Built a small browser-based poker prototype focusing on interaction flow, state handling, UI behavior, and JavaScript-based logic.

Unity / C# Development Prototype | Interactive Systems / Game Coding

- Implemented and debugged Unity systems using C# scripts, component references, Inspector-configured values, scene/prefab workflows, physics interactions, UI elements, audio behavior, and manager-style project structure.
- Worked with MonoBehaviour, GameObject/Component architecture, Rigidbody/Collider behavior, triggers/collisions, ScriptableObjects, Animator, AudioSource, NavMesh, SceneManager/GameManager patterns, builds, and Git-based Unity workflow.

Software Workflow and Documentation | Git / Repository Organization / Team Work

- Organized repository conventions, README-style documentation, project structure notes, implementation plans, and task breakdowns for small-team technical work.
- Used GitHub, GitHub Desktop, Markdown documentation, and structured communication to keep implementation work traceable.

RELEVANT TECHNICAL AREAS

Programming, Object-Oriented Programming, Web Development, Unity/C# Interactive Development, Data Structures and Algorithms, Digital Logic and Verilog, Discrete Mathematics, Multivariable Calculus, Statistics / Probability, Git-based Workflow
